## IMC Completes Data Center Migration for the Treasury Department

Dulles, VA – [Innovative Management Concepts, Inc. \(IMC\)](#), a systems engineering and information technology company, has successfully completed a data center migration in the Washington Metropolitan Area for the [U.S. Department of Treasury’s Office of the Comptroller of the Currency \(OCC\)](#), awarded by contract through the [Veterans Technology Services \(VETS\) Governmentwide Acquisition Contract \(GWAC\)](#).

OCC, whose primary mission is to charter, regulate, and supervise all national banks and federal savings associations, solicited proposals for data center infrastructure migration planning and execution support in connection with a planned move from the OCC’s data center currently based in Landover, Maryland. Under the contract, valued at more than \$3 million, IMC developed the strategies and detailed execution plans for the physical relocation of equipment to a leased facility in Northern Virginia. IMC had support from two of its subcontractors, [Sev1Tech](#) and [Information Innovators Inc.](#), to provide the contracted services, creating a team with a great deal of experience in relocation and consolidation of mission-critical IT in both the commercial and government markets.

IMC's CEO, Robert Might, noted that, "This successful data center migration demonstrates that this type of work is a logical extension of the IT support services that IMC provides to a number of Federal agencies. IMC's extensive experience and knowledge of network engineering and server administration provided the perfect foundation for this data center migration project and our partnerships with Sev1Tech and Information Innovators Inc. created the best possible team to handle the OCC data center relocation."

IMC successfully completed the migration services under this contract in late 2012.

###

**About Innovative Management Concepts, Inc.** – Innovative Management Concepts, Inc. (IMC), a [Service-Disabled Veteran-Owned Small Business](#), provides systems engineering and information technology services to government and commercial clients.
